

Installation Steps for freqtrade on MacOS M1 from source

1) Remove conda's base environment on startup.

Enter following command in terminal and relaunch terminal

```
conda config --set auto_activate_base false
```

2) Check python3 version **Python >= 3.8.x**

```
kausarhina@Kausars-MBP-2 ~ % python3 -V  
Python 3.8.9
```

3) Check clang is installed

```
kausarhina@Kausars-MBP-2 ~ % clang --version  
Apple clang version 13.1.6 (clang-1316.0.21.2.5)  
Target: arm64-apple-darwin21.6.0  
Thread model: posix  
InstalledDir: /Library/Developer/CommandLineTools/usr/bin  
kausarhina@Kausars-MBP-2 ~ %
```

If not installed , then Install xcode command line tools

```
kausarhina@Kausars-MBP-2 ~ % xcode-select --install  
xcode-select: error: command line tools are already installed, use "Software Update" to  
install updates  
kausarhina@Kausars-MBP-2 ~ %
```

4) Install ta-lib

```
kausarhina@Kausars-MBP-2 ~ % brew install ta-lib  
Running `brew update --auto-update`...  
==> Auto-updated Homebrew!  
Updated 2 taps (homebrew/core and homebrew/cask).  
==> New Formulae  
ecoji                                flagd                                gokey  
==> New Casks  
runcat-plugins-manager
```

*You have 1 outdated formula installed.
You can upgrade it with brew upgrade*

or list it with brew outdated.

Warning: ta-lib 0.4.0 is already installed and up-to-date.

To reinstall 0.4.0, run:

brew reinstall ta-lib

kausarhina@Kausars-MBP-2 ~ %

5) Add ta-lib paths in ~/.zprofile and relaunch the terminal

export TA_INCLUDE_PATH="\$(brew --prefix ta-lib)/include"

export TA_LIBRARY_PATH="\$(brew --prefix ta-lib)/lib"

6) Install hdf5

*kausarhina@Kausars-MBP-2 ~ % **brew install hdf5***

Running `brew update --auto-update`...

==> Auto-updated Homebrew!

Updated 2 taps (homebrew/core and homebrew/cask).

You have 1 outdated formula installed.

You can upgrade it with brew upgrade

or list it with brew outdated.

Warning: hdf5 1.12.2_2 is already installed and up-to-date.

To reinstall 1.12.2_2, run:

brew reinstall hdf5

kausarhina@Kausars-MBP-2 ~ %

7) Install c-blosc

*kausarhina@Kausars-MBP-2 ~ % **brew install c-blosc***

Warning: c-blosc 1.21.3 is already installed and up-to-date.

To reinstall 1.21.3, run:

brew reinstall c-blosc

kausarhina@Kausars-MBP-2 ~ %

8) Add hdf5 and c-blosc path variables in ~/.zprofile and relaunch the terminal

export HDF5_DIR=/opt/homebrew/opt/hdf5

export BLOSC_DIR=/opt/homebrew/opt/c-blosc

9) Clone the freqtrade github repository

```
# Download `develop` branch of freqtrade repository
git clone https://github.com/freqtrade/freqtrade.git

# Enter downloaded directory
cd freqtrade

# your choice (1): novice user
git checkout stable

# your choice (2): advanced user
git checkout develop
```

10) Install freqtrade from scratch

```
kausarhina@Kausars-MBP-2 freqtrade % ./setup.sh -i
/opt/homebrew/bin/python3.8
using python3.8

-----
Installing mandatory dependencies
-----
macOS detected. Setup for this system in-progress
Warning: gettext 0.21.1 is already installed and up-to-date.
To reinstall 0.21.1, run:
  brew reinstall gettext
ta-lib already installed, skipping

-----
Resetting branch and virtual env
-----
Reset git branch? (This will remove all changes you made!) [y/N]? y
- Hard resetting of 'develop' branch.
HEAD is now at 5d45adb37 Merge pull request #8009 from freqtrade/robcaulk-patch-1

Downloading https://github.com/freqtrade/frequi/releases/download/0.6.3/freqUI.zip
pip install completed
```

```
-----
Please use 'freqtrade new-config -c config.json' to generate a new configuration file.
-----
```

Run the bot !

```
-----
```

```
You can now use the bot by executing 'source .env/bin/activate; freqtrade
<subcommand>'.
You can see the list of available bot sub-commands by executing 'source
.env/bin/activate; freqtrade --help'.
You verify that freqtrade is installed successfully by running 'source .env/bin/activate;
freqtrade --version'.
kausarhina@Kausars-MBP-2 freqtrade % cd freqtrade
```

```
kausarhina@Kausars-MBP-2 freqtrade %
```

11) Activate your .env

```
source ./env/bin/activate
```

12) Install requirements

```
pip3.8 install -r requirements-dev.txt
pip3.8 install -r requirements-freqai.txt
pip3.8 install -r requirements-hyperopt.txt
```

13) Initialize the configuration

Step 1 - Initialize user folder

freqtrade create-userdir --userdir user_data

Command output:

```
(.env) kausarhina@Kausars-MBP-2 freqtrade % freqtrade create-userdir --userdir
user_data
2023-01-13 22:57:15,458 - freqtrade - INFO - freqtrade 2023.1.dev-5d45adb37
(.env) kausarhina@Kausars-MBP-2 freqtrade %
```

Step 2 - Create a new configuration file

freqtrade new-config --config config.json

Command output:

```
(.env) kausarhina@Kausars-MBP-2 freqtrade % freqtrade new-config --config
config.json
2023-01-13 23:01:44,665 - freqtrade - INFO - freqtrade 2023.1.dev-5d45adb37
? Do you want to enable Dry-run (simulated trades)? Yes
? Please insert your stake currency: USDT
? Please insert your stake amount (Number or 'unlimited'): 100
? Please insert max_open_trades (Integer or -1 for unlimited open trades): 3
? Time Have the strategy define timeframe.
? Please insert your display Currency (for reporting): USD
? Select exchange binanceus
? Do you want to enable Telegram? No
? Do you want to enable the Rest API (includes FreqUI)? Yes
